### NAD+ IM/IV Therapy

INAD/NAD+, Nicotinamide adenine dinucleotide, is a crucial enzyme in the production of our energy molecule. NAD is strongly “anti-aging” as it has been shown to grow back telomere length (the protective caps on your DNA that shorten as we age). Most will notice an immediate boost in energy, mood, and mental clarity. Anyone with chronic fatigue, low motivation, anxiety, brain fog, Parkinson’s and Opiate withdrawal will benefit.

#### Injections offered at Happy Hour or regular scheduled options

- 50mg = \$75
- 75mg = \$100
- 100mg = \$125 (for those who have past experiences)

#### IVs Offered with scheduled appointments

- 250mg = \$300
- 500mg = \$550
- 750mg = \$800

### MAKE NOTE:

- ▶ When you add “add-ons” you are adding fluid. We suggest receiving the injection in the upper outer buttocks rather than the upper arm to minimize soreness, but it is up to you.
- ▶ Please let us know if you have ever had a reaction to a needle stick, or feel faint from the sight of blood or needle. If so, please make sure you have eaten something to manage blood sugar and we will perform your injection either sitting or lying down. Please rest for a few minutes after the injection for safety (seated or laying down).
- ▶ Magnesium, B6 and B-complex may sting a little. Most other add-ons, including B12, should not feel painful. You may taste vitamins in your mouth shortly after injection.
- ▶ B12 may give your urine a reddish tint. There is nothing to worry about, it is water soluble and a natural excretion.
